EXERCISE 1- READING COMPREHENSION

The computer lab incident

At 9 :00 a.m., a teacher reports a problem in the school computer lab. Three laptops cannot open websites, but the network printer is working. A desktop computer can also access files on the local server.

A network technician arrives and checks the Ethernet cables, the switch and the router. The link lights on the switch are on. The technician explains that a local network can work even when the in- ternet connection is unavailable

Next, the technician checks the IP addresses and the gateway settings. The laptops can reach the local gateway, but they cannot open websites by name. The technician suspects a DNS resolution issue. However, this is only a hypothesis, not a confirmed cause

Before changing the configuration, the technician records the observations and informs the teacher « The local network appears to be working. I am checking the DNS settings to identify the problem. »

Answer the following questions in complete sentences.

1. What problem does the teacher report ?

2. Name two observations showing that the local network may stillwork

3. Which three pieces of network equipment does the technician check first ?

What possible cause does the technician suspect ? Is confirmed ?

What does the technician do before changing the configuration ?

EXERCISE 2 : MATCHING

Match each term (1-10) with the correct definition (A-J).

TERM	ANSWER	DEFINITION
1. Switch	_____	A. Finds and solves technical problems.
2. Router	_____	B. Connects a device to a network.
3. Access point	_____	C. Provides wireless access to a local network.
4. Server	_____	D. Identifies an interface on an IP network.
5. Network interface	_____	E. Translates domain names into IP addresses.
6. Ethernet cable	_____	F. Connects devices within a local network.
7. IP address	_____	G. Carries data over a wired connection.
8. Gateway	_____	H. Provides services or re-sources to other devices.
9. Troubleshooting	_____	I. Connects different networks and forwards packets.
10. DNS	_____	J. Provides a path to other networks.

EXERCISE 3 : TRUE OR FALSE

Write T (True) or F (False).

1. _____ A switch connects devices on a local network.
2. _____ A router and a network printer always perform the same function.
3. _____ A local file server may remain accessible when the internet is down.
4. _____ An access point provides wireless network access.
5. _____ DNS translates domain names into IP addresses.
6. _____ A link light that is on proves that every website must work.
7. _____ An IP address identifies an interface on an IP network.
8. _____ Troubleshooting means finding and solving technical problems.
9. _____ A gateway can provide a route to another network.
10. _____ A possible cause is automatically a confirmed root cause.

EXERCISE 4 – FILL IN THE BLANKS

Each word once. connects.gateway.technician.server . diagnose . cables . settings . printer . issue share

Complete the sentences using the words in the box.

1. A switch devices within a local network.

2.The_ provides a route to other networks

3.A network____ _installs and maintains network equipment.

4.A_ ____provides files or other resources to users,

5. We need to_ the problem before changing the configuration

6. Ethernet__ _ carry data over wired links

7. The technician checks the network

8. The network .can stillwork without internet access.

9.A DNS may prevent websites from opening by name.

10. Computers on a network can ressources.
